

## **REMARKS**

This amendment is supplemental to the amendment filed on March 22, 2007. New claims 26-37 have been added that further distinguish the claimed invention from the cited prior art. Specifically, these claims make clear that the routing options indicate potential routing paths to a single endpoint. This is in contrast with the cited prior art, which only teaches routing data traffic to different endpoints based on content information. Dias, for example, only teaches selecting which data cache to route the data traffic or request. It does not teach determine what path to take to a pre-selected endpoint. Balassanian teaches determining a particular resource or appliance to which to route media, but does not teach determining what path to take to a pre-selected endpoint. Hence, Applicant respectfully asserts that new claims 26-37 are in condition for allowance.

Applicant believes that all pending claims are allowable and respectfully requests a Notice of Allowance for this application from the Examiner. Should the Examiner believe that a telephone conference would expedite the prosecution of this application, the undersigned can be reached at the telephone number set out below.

Respectfully submitted,  
BEYER WEAVER LLP
